SAFETY DATA SHEET - HYDRO FLOW 1560

1. IDENTIFICATION OF THE HAZARDOUS CHEMICAL AND SUPPLIER

Product Name: **HYDRO FLOW 1560**

Product Description: Coagulant

Supplier: HYDRO FLOW PTY. LTD.
61-63 Overseas Drive Noble Park, Victoria 3174 Australia
Telephone No.: 1300 793 121
Fax No.: 1300 852 143

ABN No.: 45 078 256 578

Emergency Tel.: 1300 793 121 (ALL HOURS)

2. HAZARDS IDENTIFICATION

ADG Code: Not Classified as Dangerous Goods according to the Australian Dangerous Goods Code (ADG Code) for transport by road and rail.

GHS Classification: Not Hazardous according to the criteria of the Globally Harmonised System of Classification and Labelling of Chemicals (GHS).

LABEL ELEMENTS:

Hazard Pictogram: None

Signal Word: None

Hazard Statement/s: H335: May cause respiratory irritation.

Precautionary Statement/s
Prevention: P262 Do not get in eyes, on skin, or on clothing.
P281 Wear personal protective equipment as required.

Response: P301+P330+P331: IF SWALLOWED: Rinse mouth. Do NOT induce vomiting.
P302 + P352 IF ON SKIN: Wash with plenty of soap and water.
P305+P351+P338 IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing.
P332 + P313 If skin irritation occurs: Get medical advice/attention.
P337 + P313 If eye irritation persists: Get medical advice attention.
P362 Take off contaminated clothing and wash before reuse.
P370+P378: Not combustible. Use extinguishing media suited to burning materials.

Storage: P403 + P233: Store in a well-ventilated place. Keep containers tightly closed.

Poisons Schedule Not Listed

3. COMPOSITION / INFORMATION ON INGREDIENTS

Component	CAS No.	Concentration	Classification
Aluminium chlorohydrate	1327-41-9	30-60%	Non-hazardous
Water	7732-18-5	Balance to 100%	

4. FIRST AID MEASURES

Inhalation Remove the source of contamination or move the victim to fresh air; avoid becoming a casualty. Remove contaminated clothing and loosen remaining clothing. Allow patient to assume most comfortable position and keep warm. Keep at rest until fully recovered. Seek medical attention.

Ingestion Immediately rinse mouth with water. DO NOT induce vomiting. Never give anything by mouth if victim is rapidly losing consciousness. Seek immediate medical attention.

Skin Remove all contaminated clothing without delay. Wash skin gently and thoroughly with copious amounts of water. If irritation occurs, seek medical attention.

Eye Immediately irrigate with copious quantities of water for at least 15 minutes. Eyelids to be held open. Remove clothing if contaminated and wash skin. Seek medical assistance.

Advice to Doctor: Treat Symptomatically.

First Aid Facilities Availability of eyewash or safety shower recommended.

5. FIRE FIGHTING MEASURES

Flash Point: Not applicable - does not burn.

Flammability Non combustible liquid

Hazchem Code: Not Relevant

Suitable Extinguishing Media: Use extinguishing media suitable for surrounding materials.

Specific Hazards: Only small quantities of decomposition products are expected from this product at temperatures normally achieved in a fire. This will only occur after heating to dryness.
Fire decomposition products from this product are likely to be irritating if inhaled.

Protective Equipment for firefighters: No special protective equipment required.

6. ACCIDENTAL RELEASE MEASURES

Personal precautions: Product may be slippery when spilt. Clean up immediately to avoid accidents. Wear protective equipment to avoid inhalation or eye or skin contact.

Environmental Precautions: Avoid contaminating drains and waterways. Spillage into waterways will result in some lowering of the pH and the formation of aluminium hydroxide, which has a very low toxicity

Cleaning up spills: Contain spilled product using absorbent (soil or sand). Collect and seal in properly labelled drums ready for appropriate disposal. Dilute remaining product with water, then carefully neutralize with lime. For large spills notify local emergency services.

7. HANDLING AND STORAGE

Precautions for Safe Handling Avoid eye and skin contact. Use in a well ventilated area. Do not breathe vapours or spray mist. Wear appropriate personal protective equipment. Always wash hands before smoking, eating or drinking. Wash contaminated clothing before re-use.

Conditions for Safe Storage Store in a cool, dry place (0-30ºC). Keep containers closed when not in use. Keep away from heat and sources of ignition. Do not store with strong oxidizing or reducing agents or cyanides.

8. EXPOSURE CONTROLS / PERSONAL PROTECTION

Exposure Limits: No value assigned for this specific material by Safe Work Australia. For aluminium soluble salts (as Aluminium): TWA: 2 mg/m³. For this product, based on aluminium content TWA = approximately 0.25 mg/m³.

Engineering Controls: Use local exhaust if vapours or spray mist is generated. Natural ventilation is adequate in absence of vapours or mists.
.

Personal Protective Equipment:

Eyes: Wear chemical resistant safety glasses or face shield.

Hands: Wear PVC or rubber gloves.

Body: Chemical resistant apron or overalls.

Respiratory: If inhalation risk from spray or mists exists wear a half face-piece filter respirator meeting the requirements of AS/NZ 1715 and 1716.

9. PHYSICAL AND CHEMICAL PROPERTIES

Form	Liquid
Appearance	Colourless to slightly cloudy
Odour	Odourless
Boiling Point:	Approximately 100-110°C at 100kPa.
Freezing Point	Below 0°C
Solubility in Water	Miscible
Specific gravity	1.3 – 1.4 (at 25°C)
pH Value	2 – 4 neat
Vapour Pressure	2.37 kPa at 20°C (water vapour pressure).
Evaporation Rate	Not available
Brookfield Viscosity	Not available
Flammability	Non combustible liquid

NOTE: The physical data presented above are typical values and should not be construed as a specification.

10. STABILITY AND REACTIVITY

Chemical Stability	Stable under normal conditions of storage and handling. This product can hydrolyse and form a precipitate of aluminium hydroxide in very dilute aqueous solutions. The solubility is dependent on the pH.
Conditions to avoid	Heat-sensitive, avoid exposure to extreme heat (keep below 30°C). Avoid sources of ignition.
Materials to avoid	Avoid strong oxidizing or reducing agents and cyanides.
Hazardous Decomposition	Only small quantities of decomposition products are expected from this product at temperatures normally achieved in a fire. This will only occur after heating to dryness. May form hydrogen chloride gas, other compounds of chlorine, aluminium compounds.
Hazardous Reactions	Strong aqueous solutions of the product will readily react with sodium hydroxide and other alkali to form a thick slippery paste or gel.

11. TOXICOLOGICAL INFORMATION

Toxicity Data No data for this product. For aluminium salts: LD50 Oral (rat) 3,311 mg/kg. LD50 Oral (mouse) 1,990 mg/kg.

Inhalation Breathing in vapour, mists or aerosols may produce respiratory irritation.

Ingestion No adverse health effects expected, however ingesting large amounts may cause nausea and vomiting.

Skin Contact with skin may result in irritation.

Eye May be an eye irritant.

Sensitisation: Non sensitizing.

Chronic Effects Repeated or prolonged exposure may cause dermatitis.

12. ECOLOGICAL INFORMATION

Ecotoxicity No data available for this product.

Environmental fate: Not a persistent pollutant; can cause coagulation of solids in aqueous suspension, especially when highly diluted by the water in which the solids are suspended. Aluminium compounds are common in most soils. When diluted by copious quantities of water (for example, to the point that the concentration is less than about 100 grams per cubic meter), this product will hydrolyse rapidly to form aluminium hydroxide, which can be expected to become a part of the natural soil profile if not recovered. When not highly diluted with water, this product may be slow to hydrolyse and may form a mixture of partially soluble aluminium species and heavy floc of aluminium hydroxide. Until further diluted, this mixture could affect marine life by clogging sensitive respiratory mechanisms in a similar fashion to muds and clays.

Persistence / degradability This product is an inorganic compound. A metal hydroxide precipitate is formed during hydrolyses in the pH range 5 to 7; due to this reaction the pH of the water decreases. If phosphates are present, then metal phosphate complexes may form.

Bioaccumulation No data available.

13. DISPOSAL CONSIDERATIONS

Waste Disposal Consult an EPA accredited waste disposal agent regarding recycling or disposal options.

Container Disposal Rinse out container with water and dispose of in plastics recycling bin.

14. TRANSPORT INFORMATION

Road & Rail Transport Not classified as Dangerous Goods by the criteria of the Australian Dangerous Goods Code (ADG) for transport by road and rail.

Sea Transport Not classified as Dangerous Goods by the criteria of the International Maritime Dangerous Goods Code (MDG Code) for transport by sea.

15. REGULATORY INFORMATION

Regulatory Information All components of this product are either listed on the inventory or are exempt from listing.

Poisons Schedule Product is not listed in Australian Standard for Uniform Scheduling of Medicines and Poisons.

16. OTHER INFORMATION

Date of Preparation 09-05-2023 Version 3.0
